

P4: Ghostbusters

CS6300: Artificial Intelligence, Spring 2018
University of Utah

Jake Pitkin

Self Analysis

1. What was the hardest part of the assignment for you?

The trickiest part of this assignment for me was getting the probability distribution I was calculating correct.

2. What was the easiest part of the assignment for you?

I didn't hit any roadblocks when completing this project and was able to finish in a reasonable time.

3. What problem(s) helped further your understanding of the course material?

I was having issues with my code timing out but then I switched how I was sampling. The two sampling functions don't differ much but they make a big time difference. It was interesting to see those decisions matter.

4. Did you feel any problems were tedious and not helpful to your understanding of the material?

I didn't.

5. What other feedback do you have about this homework?

Fun last assignment. Overall I had a lot of fun with the Pacman framework.
